- **Functions:** Utilize pre-defined functions for common tasks, simplifying programming.
- **Loops:** Implement loops to automate repetitive tasks.
- **Conditional Statements:** Use conditional statements to control the flow of execution based on specific conditions.

Example: A simple GEPscript to calibrate the GEP55:

```
```
```

```
calibrateSensor(sensor1,
"standardSolutionA");
```

```
calibrateSensor(sensor2,
"standardSolutionB");
```

```
verifyCalibration();
```

```
```
```

Regular calibration using the automated features and possibly custom scripts like the one above, is vital to maintain the accuracy of the GEP55. Failure to calibrate regularly can lead to inaccurate measurements and compromised data integrity. Refer to the specific calibration procedures outlined in the appendix of this GEP55 manual for detailed instructions.
