Frequently Asked Questions (FAQ)

Q1: What is the difference between a flybar and flybarless helicopter?

A1: A flybar helicopter uses a mechanical flybar system to provide stability. A flybarless helicopter relies on electronic sensors and sophisticated algorithms to control its orientation and stability. This leads to increased agility and responsiveness.

Q2: Do I need specialized software for the Align Trex 500 FBL?

A2: Yes, Align provides proprietary software to configure the FBL system's parameters. This software is typically used with a PC and a connector to communicate with the helicopter's flight controller. The manual will detail the software's usage.

Q3: How important is proper gyro calibration?

A3: Proper gyro calibration is crucial for stable and predictable flight. An improperly calibrated gyro can lead to erratic behavior, difficulty controlling the helicopter, and potentially dangerous situations.

Q4: What are gain settings and how do I adjust them?

A4: Gain settings determine the sensitivity of the FBL system's response to changes in the helicopter's orientation. Higher gains lead to more responsive but potentially less stable flight, while lower gains result in more stable but less responsive handling. The manual will guide you on adjusting these parameters safely and incrementally.
