FAQ

Q1: What is the difference between a software testing lab manual and a test plan?

A1: A software testing lab manual is a broader, more comprehensive document outlining standard processes, procedures, and best practices for the entire software testing team. A test plan, on the other hand, is specific to a particular project or software release. It details the testing scope, objectives, strategies, timelines, and resources for that specific project. The test plan would reference the lab manual for standard procedures.

Q2: How often should a software testing lab manual be updated?

A2: The frequency of updates depends on factors like technological advancements, changes in testing methodologies, and evolving team practices. However, a good rule of thumb is to review and update the manual at least annually, or whenever significant changes occur that affect testing processes.

Q3: Who is responsible for maintaining the software testing lab manual?
