FAQ:

Q1: What are the main risk factors for AMD?

A1: Age is the most significant risk factor. Others include family history of AMD, smoking, high blood pressure, obesity, and prolonged exposure to sunlight. Genetic factors play a substantial role, with certain genes increasing susceptibility.

Q2: What is the difference between dry and wet AMD?

A2: Dry AMD is characterized by gradual deterioration of the macula due to the breakdown of photoreceptor cells and retinal pigment epithelium. Wet AMD, more severe, involves abnormal blood vessel growth under the retina (neovascularization), leading to rapid vision loss.

Q3: How is AMD diagnosed?

A3: Diagnosis involves a comprehensive eye exam, including a dilated pupil examination, Amsler grid testing (to detect visual distortions), and optical coherence tomography (OCT) to visualize retinal structures. Fluorescein angiography may be used to assess neovascularization in wet AMD.

Q4: What are the treatment options for wet AMD?

A4: The primary treatment for wet AMD involves anti-vascular endothelial growth factor (VEGF) injections, such as ranibizumab or aflibercept, which inhibit abnormal blood vessel growth. These injections are typically repeated at regular intervals.

Q5: Are there any treatments for dry AMD?

A5: Currently, there's no cure for dry AMD, but AREDS2 (Age-Related Eye Disease Study 2) formulated nutritional supplements, containing specific vitamins and minerals, may help slow progression in some

individuals. Low vision rehabilitation techniques can help patients cope with vision loss.

Q6: Can AMD be prevented?

A6: While aging is a primary risk factor, modifying other risk factors like quitting smoking, managing blood pressure, maintaining a healthy weight, and protecting eyes from excessive sunlight exposure can potentially reduce the risk of developing or slowing the progression of AMD.

Q7: What is the prognosis for AMD?

A7: The prognosis varies depending on the type and stage of AMD. Dry AMD progresses slowly, while wet AMD can cause rapid and significant vision loss. Early detection and timely treatment are essential to preserve vision as much as possible.

Q8: Where can I find more information on AMD?

A8: Reliable information on AMD is available from the National Eye Institute (NEI), the American Academy of Ophthalmology, and other reputable organizations dedicated to eye health. Your ophthalmologist can also provide personalized guidance and support.
